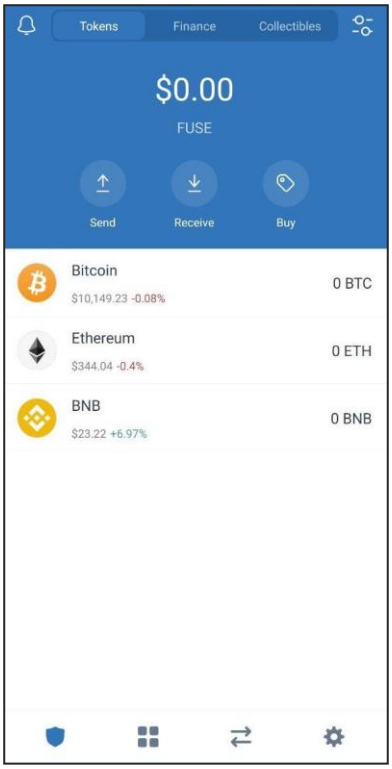
Trust wallet tutorial for FUSE

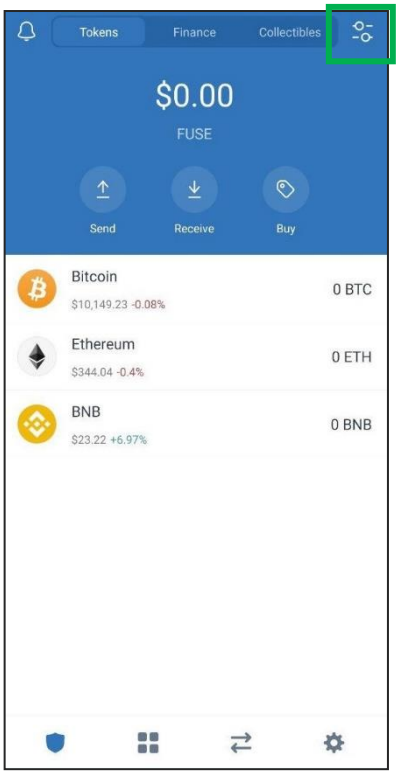
This tutorial will guide you to add FUSE ERC20 token on your Trust wallet and also on how to send/receive them.

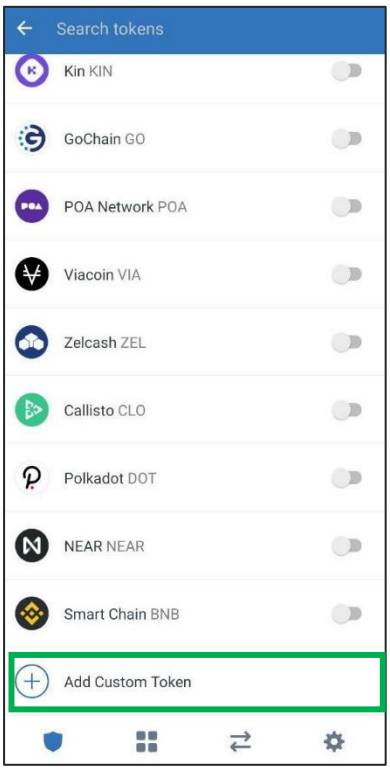
This guide has been prepared by using Trust wallet version **1.15.5**.

Step 1: Open Trust wallet on your phone and you should see the interface as shown below.



Step 2: Press the right hand side top corner button which will show you the interface as shown in the below and scroll down to see **"Add Custom token"**.





Step 3: Make sure the network is selected as **"Ethereum"** and enter the FUSE token contract details as mentioned below.

FUSE token:

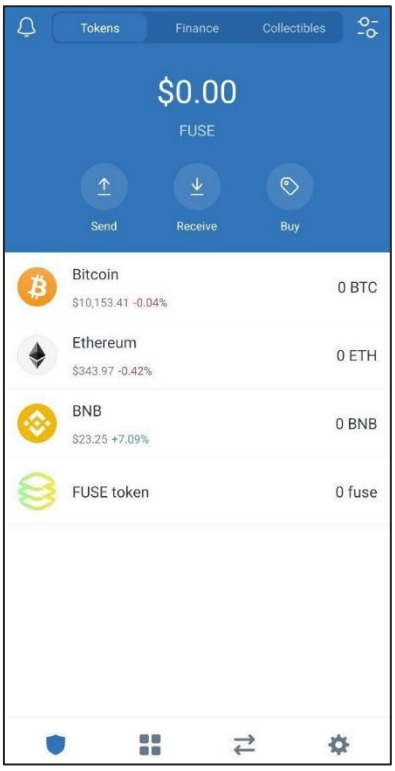
Contract address - 0x970b9bb2c0444f5e81e9d0efb84c8ccdcdcaf84d

Name - FUSE token

Symbol - FUSE

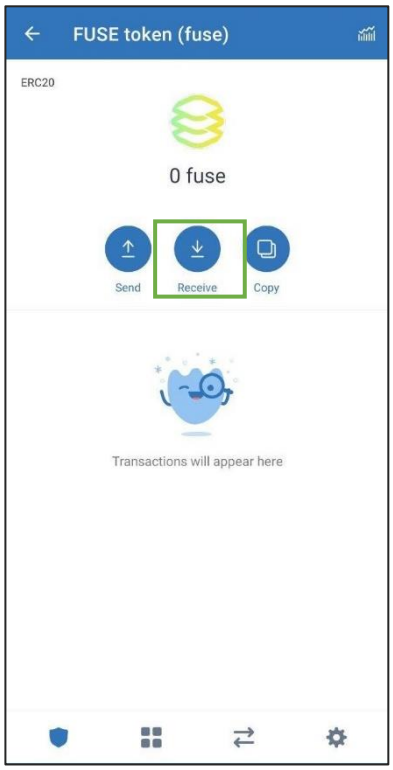
Decimals - 18

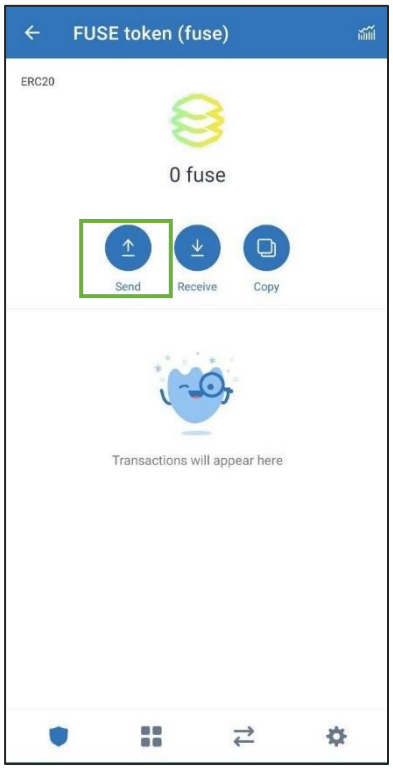
Step 4: You have added **FUSE token** successfully on your Trust wallet and now you should see **FUSE token** on your main page as shown below.

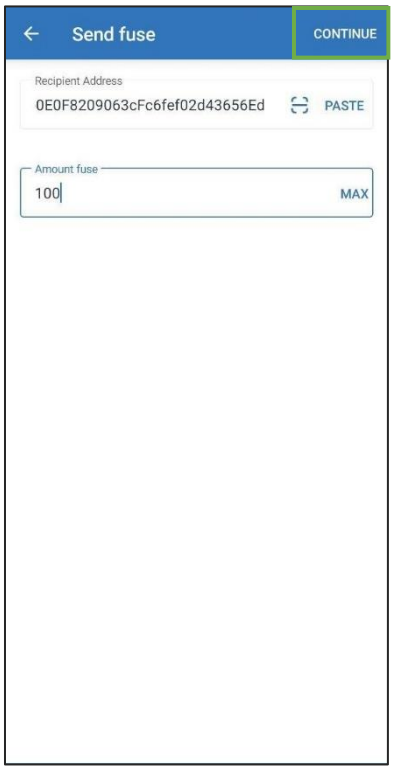


Now let’s learn how to Send/Receive **FUSE tokens** on Trust wallet.

To receive FUSE tokens: Once completing Steps 1-4, Press on **FUSE token** in the main page of your wallet and you should see Send/Receive button as shown below. Now click on **“Receive”** will show your **FUSE token** receiving address (Public key) to which you can send FUSE tokens and it will reflect on your trust wallet once confirmed by the blockchain.







To send FUSE tokens: Press on **FUSE token** in the main page of your wallet and you should see Send/Receive button as shown below. Now click on **“Send”** which will take you to next page where you need to enter the **“Recipient Address”** to which you want to send **FUSE tokens** to and the **“Amount”** and click **“Continue”.** You can adjust the gas fees according to the Ethereum network gas prices and confirm the transaction.
